EDUCATION

- **Tsinghua University** *Sep 2017 – Jun 2024*
B.S. & M.S. in Automation Engineering, Minor in Data Science *Beijing, China*
 - **Bachelor GPA:** 3.81/4.00 (Rank 20/180, top 10%); top grades across math, physics, and CS coursework.
 - **M.S. Research:** Zero-Knowledge Proofs for ML model integrity verification; Retrieval-Augmented Generation (RAG) for LLMs.
 - **Published Paper:** CVPR 2022: [Back to Reality](#) ([Code](#)).

SKILLS

- **Core Skills**
 - **AI-Powered Development:** **Heavy Claude Code user**, deeply integrated into all engineering workflows; **expert in Vibe Coding & Prompt Engineering**, fluent at iterating with AI agents at high frequency while owning top-level code architecture.
 - **Programming Languages:** Proficient in Rust, Python, Solidity, NodeJS/TypeScript; familiar with C++ and Move-family smart-contract languages.
 - **Blockchain & EVM Internals:** Deep grasp of EVM internals (transaction processing, parallel execution, etc.); experienced in cross-chain bridge design and multi-chain contract development.
 - **Other:** Classic ZK-SNARK protocols (Groth16) and foundational math (number theory, abstract algebra); proficient with Git, Linux, AWS, and related development tooling.

WORK EXPERIENCE

- **Tabula Labs** *Oct 2024 – Present*
Tech Lead / Researcher (Full-time) *Shanghai / Hybrid*
 - Focus on AI- and Web3-related research and project incubation across DeFi and stablecoin payments, on-chain privacy and compliance, high-performance L1 chain development, ML model tuning, and embodied-intelligence data collection.
- **Altius Labs** *Oct 2024 – Apr 2026*
Tech Lead (Part-time) *Remote*
 - Led architecture and development of core components for a next-generation **parallel-execution EVM**, built on Paradigm's Rust-eth (RETH) foundation.
 - Refactored EVM transaction processing logic to implement the **OCCDA (Optimistic Concurrency Control)** algorithm, enabling parallel execution; delivered a comprehensive benchmark toolset quantifying the resulting performance gains.
- **Conflux Network** *Mar 2023 – Sep 2024*
Engineering Lead (Internship / Part-time) *Remote*
 - Led design and delivery of **Conflux Bitcoin L2 architecture**, leveraging hybrid PoW/PoS to bring a high-performance execution layer to the BTC ecosystem.
 - Led core engineering of the **Cross-Space Bridge**; independently developed cross-chain bridge [MesonFi](#) smart contracts and SDKs on [Algorand](#), [Aptos](#), [Sui](#), and [Solana](#).
- **Infinity Ventures Crypto (IVC)** *Mar 2023 – Sep 2024*
Research Analyst (Internship / Part-time) *Remote*
 - Evaluated seed-stage Web3 projects across ZK-Layer2, LSD, Privacy, and Ethereum Infrastructure; independently produced 40+ [analytical reports](#).

- **Microsoft Research Asia (MSRA)**

Mar 2022 – Mar 2023

Python Engineer (Internship / Part-time) – Scientific Computing Team

Beijing / Hybrid

- Optimized DFT (Density Functional Theory) algorithms for high-precision protein structure computation; translated scientific models into efficient code and refined the computational pipeline.

OPEN SOURCE

- **WTF Academy**

Jun 2022 – Jun 2023

Core Contributor

Remote

- Built 10+ sets of tests and tutorials for [WTF-Solidity](#), an 8k+ star Web3 development tutorial repo on GitHub.
