EDUCATION

- **Tsinghua University** *Sep 2017 – Jun 2024*
B.S. & M.S. in Automation Engineering, Minor in Data Science *Beijing, China*
 - **Bachelor GPA:** 3.81/4.00 (Rank 20/180, top 10%); top grades across math, physics, and CS coursework.
 - **Core Automation Coursework:** **A / A+** across core hardware and control courses including Circuit Theory, Automatic Control Theory, and Digital / Analog Electronics.
 - **M.S. Research:** Zero-Knowledge Proofs for ML model integrity verification; applied Retrieval-Augmented Generation (RAG) for LLMs.
 - **Published Paper:** CVPR 2022: [Back to Reality \(Code\)](#).

SKILLS

- **Core Skills**
 - **AI-Powered Development:** **Heavy Claude Code user**, deeply integrated into all engineering workflows; **expert in Vibe Coding & Prompt Engineering**, fluent at iterating with AI agents at high frequency while owning top-level code architecture.
 - **Programming Languages:** Proficient in Rust, Python, Solidity, NodeJS/TypeScript; familiar with C++ and Move-family smart-contract languages.
 - **Blockchain & EVM Internals:** Deep grasp of EVM internals (transaction processing, parallel execution, etc.); experienced in cross-chain bridge design and multi-chain contract development.
 - **Other:** Classic ZK-SNARK protocols (Groth16) and foundational math (number theory, abstract algebra); proficient with Git, Linux, AWS, and related development tooling.

WORK EXPERIENCE

- **Digients Tech** *April 2026 – Present*
Co-Tech Lead (Full-time) *Shanghai / Hybrid*
 - Independently own the full stack – mobile, backend, and data infrastructure – of an ego-centric data collection platform whose output trains embodied-intelligence VLA / World Models. Scaled to **1 PB+ (20M objects)** of **corpus and hundreds of crowdsourced collectors online** within four months.
 - **Data Collection App:** Built the mobile capture tool in Flutter, shipping 19 production releases to the [App Store](#) and [Google Play](#). Wrote dual native recording engines on AVFoundation / Camera2, supporting interrupted-recording recovery, resumable background upload, and Chinese / English / Vietnamese localization.
 - **Other Backend Work:** Delivered data-operations systems including a collection dashboard and a QA/annotation console (tens of thousands of hours of data); led data interoperability and cost control for dual-platform S3 storage across AWS and Alibaba Cloud.
- **Altius Labs** *Oct 2024 – Apr 2026*
Tech Lead (Full-time) *Shanghai / Hybrid*
 - Led architecture and development of core components for a next-generation **parallel-execution EVM**, built on Paradigm's Rust-eth (RETH) foundation.
 - Refactored EVM transaction processing logic to implement the **OCCDA (Optimistic Concurrency Control)** algorithm, enabling parallel execution; delivered a comprehensive benchmark toolset quantifying the resulting performance gains.
- **Conflux Network** *Mar 2023 – Sep 2024*
Engineering Lead (Internship / Part-time) *Remote*

- Led design and delivery of **Conflux Bitcoin L2 architecture**, leveraging hybrid PoW/PoS to bring a high-performance execution layer to the BTC ecosystem.
- Led core engineering of the **Cross-Space Bridge**; independently developed cross-chain bridge [MesonFi](#) smart contracts and SDKs on [Algorand](#), [Aptos](#), [Sui](#), and [Solana](#).

- **Microsoft Research Asia (MSRA)**

Mar 2022 – Mar 2023

Python Engineer (Internship / Part-time) – Scientific Computing Team

Beijing

- Optimized DFT (Density Functional Theory) algorithms for high-precision protein structure computation; translated scientific models into efficient code and refined the computational pipeline.

OPEN SOURCE

- **WTF Academy**

Jun 2022 – Jun 2023

Core Contributor

Remote

- Built 10+ sets of tests and tutorials for [WTF-Solidity](#), an 8k+ star Web3 development tutorial repo on GitHub.
